# FROM THE CEO

---

"I came into the steel building industry more than a decade ago. I was full of new ideas for technological improvements, dreams and aspirations of modernizing the way the steel building industry has been operating, as it hasn't changed for the last 15 years.

After multiple attempts to encourage top-level management to improve the outdated delivery and engineering process of our buildings and implement new ways to serve customers better using my IT background, the idea of opening my own business came to life. I promised myself when I started Metal Pro, that I would always have an open door policy, so that when an employee contributes an idea, they always be heard. Fast forward 4 years, we are a leader in the industry, utilizing the latest in technological advances for customer acquisition, product management, delivery scheduling, engineering and process support.

Our customers always have confidence knowing that when they place an order with us they will receive their certified engineered drawings after 5 days of their purchase. Because we are a digital company, orders are streamlined electronically, from document delivery to blueprint and foundation drawings, we always make the process easy and painless. From your initial design plans right up until, and after your build is completed, and thanks to our highly-dedicated team showing uncompromising integrity on each sale, the Metal Pro Buildings Family is growing stronger day by day"

— **Herbert Broderick, CEO**

# OUR COMPANY

**At MPB,** Our philosophy has always remained the same since day one. To listen carefully to each customer's needs and deliver the perfect solution with uncompromising honesty and integrity on each sale.

To provide not just the best quality and most-durable buildings on the market but to deliver unparalleled customer service on every solution, every time building communities one building at a time.

We are proudly Canadian owned and operated, we always sell on honesty and respect, we always treat our customers as neighbors and friends and our biggest asset is always our employees.

Our core values have always been customers, employees and communities first, we always take into consideration the impact every building has on the environment, our community and how it will make our customer feel. We provide custom made buildings with these core values always in mind so that every building can be customized to compliment the different facets of our customers interests and needs perfectly.

Our customers span from hobbyists, to architects, to engineers, to the local man and pop starting a new business. Hence our team is trained to have listening ear so that we can take your dream and make it a reality every time. Our product is only limited by one's imagination

# OUR COMPANY

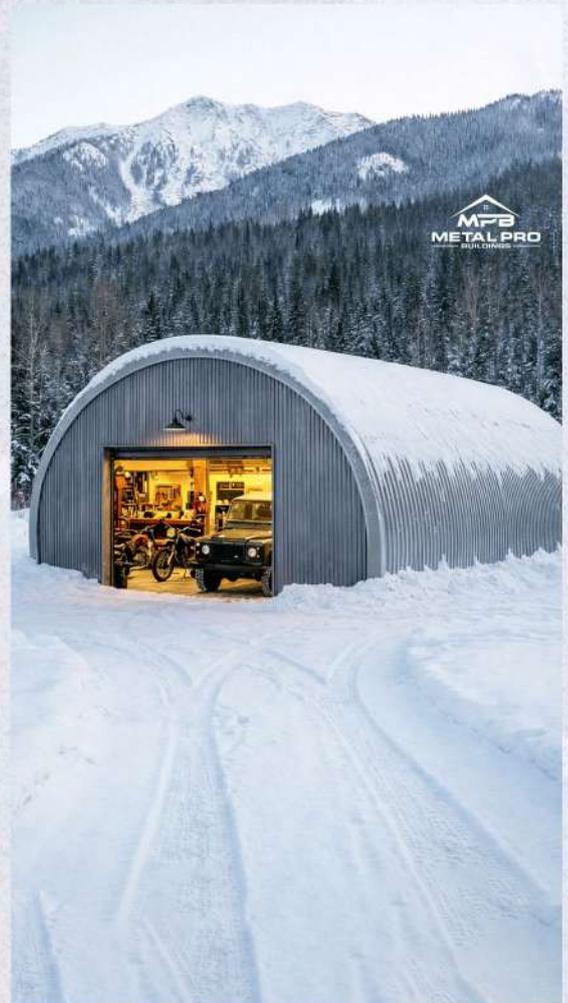

**We** leverage over 150 companies through the NC/ network of registered and certified companies for our Pre-eng Buildings and are able to ship our building kits out of almost every state in America.

This drastically cuts down on shipping time, as we always select a factory that is closest to your location. Our services include the in-house designing, engineering, manufacturing and delivery of complete building kits, direct from the factory to you

We always use the latest technology in order to provide a multifaceted approach to show you as many types of building options as possible to show you why your quote is exactly what you're looking for.

**Metal Pro Buildings Kits** come in virtually any size. Creating custom shapes and sizes is easy, Our carefully engineered designs will help you achieve your desired results quickly, efficiently, and with minimum labour All our buildings are clear span, allowing for a quick and painless expansion if needed.

FOR OVER 40 YEARS OUR FACTORY HAS PROVIDED CANADIAN AND AMERICAN HOMEOWNERS AND BUSINESSES WITH THE HIGHEST QUALITY PRE-ENGINEERED STEEL BUILDINGS.

# OUR BUILDINGS

**Our premium** quality, pre-engineered steel building kits have been in use for a wide range of agricultural, industrial, commercial, residential and recreational applications.

Every Metal Pro building solution is designed and manufactured in Ontario by a team of highly dedicated building specialists and certified engineers.

Our factory is more than just a processor of steel. We have a State of the art manufacturing facility that uses only the most advanced engineering techniques and technologies, resulting in technological innovations and unbeatable engineering methods.

COATED WITH SUPER-TOUGH GALVALUME PLUS™ TECHNOLOGY, A DRY, CLEAR COATING THAT GIVES YOUR BUILDING A MAINTENANCE FREE FINISH.

# OUR FACTORY

We are the only manufacturer in our industry to offer both "opposite" and "crimp" designs, double-bolt panel lap connections, and flat and fully-crimped end-to-end paneling

This also includes 18 and 24-inch roof and sidewall panels. In other words, the options are practically limitless!

OUR BUILDINGS ARE MADE FROM THE HIGHEST QUALITY GALVALUME PLUS STEEL THAT MEETS ALL CSA-A660 QUALITY REQUIREMENTS FOR STEEL BUILDING SYSTEMS AS PER THE NATIONAL BUILDING CODE OF CANADA (NBCC).

# BUILDINGS MODELS

## ECONOSPAN

Peaked roof with straight-sided walls, varying center heights, and virtually unlimited lengths. Widths ranging from 16' - 40'.

**Metal Pro's Econospan** Quonset building model is engineered with a straight roof, straight sided, clear-span design. Econospan buildings have a uniform roof slope of 18 degrees (approximately 4:12 roof pitch), this allows us to offer the largest variety of width options, when compared to any company in the industry. This Quonset Hut is suited for a broad range of applications ranging from, storage, on-site offices, retail out/ets, free-standing garages, workshops, mechanic shop applications and much more.

# BUILDINGS MODELS

## S-SERIES

S-Series buildings feature a straight-walled, multiple radius, clear-span arch design.

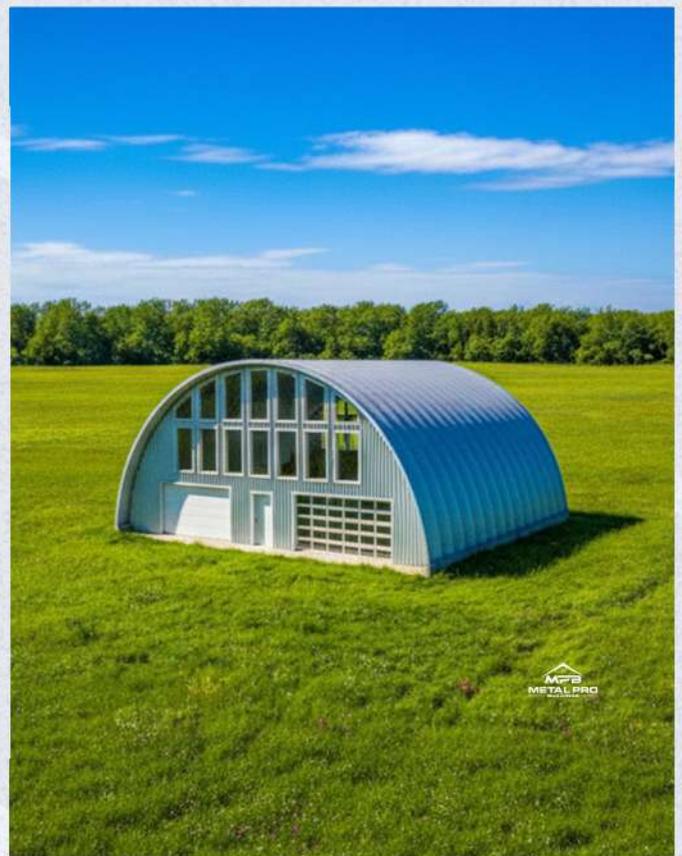

Our standard buildings range in width from 20 to 60 feet with varying center heights and virtually unlimited lengths. The S-Series building is very popular for medium-to-large industrial, agricultural and military applications, equipment storage, commercial offices, retail outlets, manufacturing facilities, garages and workshops. Custom buildings in excess of 60 feet in diameter are also readily available.

# BUILDINGS MODELS

## ARCH STYLE

Nicknamed "The Original Quonset", Arch Style buildings range in widths from 19' to 100' and are available in virtually any length and height.

These buildings feature single-radius, truss-less, clear span construction, with steep sidewall clearances that make this model versatile, economical, and durable. Metal Pro has taken it a step further, by offering single or double-over-lap construction for even more options.

Arch Style buildings are suitable for a complete range of industrial, commercial, agricultural and military applications. They may be used as permanent or portable structures and can be dismantled and relocated if required.

# BUILDINGS MODELS

## MINI SERIES

Mini steel buildings are 30' to 20' wide and are available in virtually unlimited lengths. The Mini building is constructed with a reduced width and depth than our regular sized panel, this makes them easier to handle than our competition's panels during construction.

Our buildings' classic Arch Design has been used for centuries to create strong, long-lasting structures. Because there are no trusses or overhead obstructions, every building has 100 % usable space.

# BUILDINGS MODELS

## ALPINE

Peaked roof with sloping walls. Alpine models are available in many different sizes. Widths ranging from 20' to 50'.

Alpine buildings feature a cathedral-style peaked roof with a 4:12 pitch. Popularly known as the "wide-body Econospan", it is designed as a tough, rugged and durable steel building solution. The Alpine is ideal for commercial/ offices, retail outlets, storage, workshops, warehousing, erecting in high snow areas and so much more.
